

2. Inverted Index using BeautifulSoup

August 11, 2018

Saumay Agrawal
16BCE1151

```
In [1]: import requests
        from bs4 import BeautifulSoup

In [2]: # Initializing the start URL and inverted index structure
        start_url = 'http://www.vit.ac.in/'
        invindex = {}

In [3]: # Extract links from the 'url' and modify the inverted index accordingly.
        def getlinks(url):
            page = requests.get(url)
            soup = BeautifulSoup(page.content, 'html.parser')
            links = []
            for anchor in soup.find_all('a'):
                link = anchor.get('href')
                # Discarding empty tags
                if(link == '#' or link == '' or link == None):
                    continue
                # Converting relative URLs to absolute URLs
                if(link.find('http')== -1):
                    link = url[:-1]+link
                # Creating a key for 'link' in inverted index
                if link not in invindex.keys():
                    invindex[link] = [0, []]
                # Constructing the inverted index for 'link'
                if url not in invindex[link][1]:
                    invindex[link][0] += 1
                    invindex[link][1].append(url)
                # Discarding document type links
                if(link.find('.doc')>=0 or link.find('.pdf')>=0):
                    continue
                # Discarding links except the domain of VIT
                if(link.find('vit')== -1 and link.find('vtop')== -1):
                    continue
                links.append(link)
            return links
```

```
In [4]: # Initializing crawled and queued sets
```

```
crawled = set()
